

Project Proposal: Cybersecurity Dashboard

Submitted By: Dipu Kumar

Date: 11 April 2025

1. Project Title

Cybersecurity Dashboard for Real-Time Threat Monitoring and Analytics

2. Introduction

In the modern landscape of increasing cyber threats, organizations require a robust tool to monitor, detect, and mitigate potential security breaches. A Cybersecurity Dashboard provides a centralized platform for real-time log monitoring, threat alerts, and analytics, empowering security teams to act swiftly and decisively.

3. Objectives

- Develop a functional and user-friendly cybersecurity dashboard.
- Implement features such as real-time log monitoring, automated alerts for potential threats, and intuitive analytics visualizations.
- Ensure scalability and reliability for diverse organizational needs.

4. Features

1. Real-Time Log Monitoring:

- Centralized collection of logs from servers, applications, and devices.
- Parsing and normalization of log data for consistency.

2. Threat Detection Alerts:

- Automatic notifications for potential security incidents.
- Configurable severity levels (low, medium, high, critical).

3. Analytics & Visualizations:

- Graphical representations of trends and anomalies.
- Dashboards with filters for timeline, event type, and source.

5. Technology Stack

- **Backend:** Python (Flask/Django)
- **Frontend:** React.js for dynamic and responsive interfaces
- **Database:**
 - **MongoDB** for unstructured log data.
 - **SQL** for structured data storage and querying.

- **Integration Tools:** APIs for log collection and SIEM integration.

7. Expected Outcome

A secure, scalable, and intuitive dashboard to enhance an organization's cybersecurity posture through proactive monitoring, real-time alerts, and actionable analytics.
